

Who's walking away with your intellectual property?

Internet Evidence Finder (IEF) is a digital forensics solution that can search a hard drive, live RAM captures, or files for Internet-related evidence. IEF was designed for digital forensic personnel including: forensic examiners, cyber security analysts, cyber forensic investigators, IT security, incident response managers, and private investigators.

IEF can recover evidence left behind within social networking artifacts, instant messaging chat histories, popular webmail applications, web browsing history, and peer-to-peer file sharing applications.

IEF FOR BUSINESS

Learn how IEF helps businesses in a range of corporate investigations, from intellectual property theft to employee misconduct.

“IEF simplifies the act of locating crucial artifacts used in an investigation. We have had great success with your product and look forward to continuing to use it.”

Fortune 500 Technology Company

Here are some examples of how businesses are using IEF to find critical evidence in their investigations:

DATA BREACHES

Disgruntled insiders, competitors seeking advantage, transnational criminal enterprises

IP THEFT

Current or former employee copying sensitive information

EMPLOYEE MISCONDUCT

Improper use of a computer, a wrongful termination suit, sexual harassment, pornography or misappropriation of assets

FRAUD

Money laundering, insurance fraud, securities fraud, embezzlement and insider trading

KEY BENEFITS

ROBUST SEARCH & DEPENDABLE RESULTS

IEF can recover more types of digital evidence than any other solution, which makes it more likely to uncover critical evidence. You can do a single search and find all Internet related evidence without having to try keywords, manually carve data, or run individual scripts. It's the closest thing to a "Find All Evidence" button.

With our patent-pending technology, IEF finds more forms of Internet artifacts and filters out false positives. IEF is able to recover evidence from not only deleted data, but also live RAM captures, which often hold vital evidence.

ACCELERATE INVESTIGATIONS & REDUCE CASE BACKLOG

With the ever-growing hard drive capacities and the explosive growth in both case loads and complexity, organizations and agencies of all kinds require an accurate and comprehensive solution for recovering data. IEF is a rapid automated solution that saves a tremendous amount of time and allows you to work on other parts of the investigation while it's searching. It's as straightforward as hitting search and coming back to a comprehensive report to review the results.

USER FRIENDLY

Both experienced and new forensic examiners/investigators find the IEF user interface flexible, intuitive and easy to use. Because its reporting options are as impressive as its analytical capabilities, producing professional reports for both internal or external audiences is equally simple and straightforward. Time is of the essence and that is why there is no complex configuration or setup.

THE GOLD STANDARD IN DIGITAL ARTIFACT RECOVERY

IEF is considered the defacto standard for the recovery of digital evidence and is used by thousands of the most prestigious national security agencies, law enforcement teams, and corporations around the world.

COURT ADMISSIBLE

The reporting feature that's built into IEF provides the information examiners require to manually verify all results.
